

Press release

Powerful PDM solution for Inventor CAD software

Nittendorf, 23.06.2021

PDM Studio enables efficient product data management for small and medium-sized companies that use the parametric 3D CAD solution Autodesk Inventor. The functionality of the PDM system from CAD Partner GmbH can be used directly from Inventor.

The CAD integration is characterised by the fact that PDM Studio analyses and records the inner structure of even complex file relationships and makes them available to the user. PDM Studio is multi-CAD compatible and currently supports not only Inventor but also other CAD solutions such as Solid Edge, NX or Solidworks, even in combination. CAD data and other associated data such as NC codes, Word and Excel documents or customer e-mails can thus be managed centrally and made available throughout the company. This helps machine and plant manufacturers to manage their confusing amounts of data and to gain a decisive competitive advantage in the future, because machines and plants are becoming increasingly intelligent and their product data correspondingly more complex. Even with standard machines, the trend is towards individual configurations. These must be assigned to the appropriate customer and made traceable for documentation and support. The basis for this is created by this efficient product data management solution, which accelerates the search for information and facilitates the work in design, production, sales and service.

PDM Studio includes many functions in its standard scope, such as a where-used list, life cycle representation, a revision history, batch processing of metadata or project management. The individual requirements of a company are served by additional functions such as the integration in Microsoft Office, a geometric search or an editor for automating routine processes without programming knowledge. This editor, which is used for sheet metal processing, for example, prevents manual errors, relieves employees of routine tasks and saves time. In addition, PDM Studio offers interfaces to over 130 applications and data sources such as SAP S/4 HANA, Salesforce or Microsoft Azure.

More information about PDM Studio can be found at www.pdm-studio.tech/en/.

About CAD Partner GmbH

CAD Partner GmbH, founded in 1989, specializes in the software development of innovative CAD and PDM/PLM products and tools as well as individual services within its corporate group. With PDM Studio, the company from Nittendorf near Regensburg offers its own open and powerful solution for managing product data with focus on small and medium-sized companies in mechanical and plant engineering. The team's high level of software expertise also convinces long-standing partners such as Siemens Digital Industries Software: CAD Partner GmbH is worldwide OEM for Solid Edge standard part libraries. Furthermore, it develops tools for data migration and management as well as helpful additional programs.
